Mateo Jarén García Galarza

Software Engineer | Backend, Cloud & Security

Quito, Ecuador | mateojgarciag@gmail.com | 096 312 2042 | www.cotbert.com | Cotbert2

mateo-garcia-03b496334

Summary

Software Engineer with 3+ years of experience in backend development, cloud infrastructure, and cybersecurity. Specialized in building scalable multi-tenant platforms, designing secure APIs, and managing AWS cloud environments. Experienced in DevOps, penetration testing, and AI-first software engineering practices, including Specification-Driven Development (SDD), automated testing, and AI-assisted development workflows.

Experience

VELAONE, Backend Software Engineer — United States (Remote)
Mar 2026 – present
9 months

Backend engineer focused on scalable multi-tenant SaaS platforms, cloud-based applications, and AI-first software development.

- Designed and developed multi-tenant backend services using TypeScript, JavaScript, Node.js, and NestJS.
- Built and maintained RESTful APIs, third-party integrations, and asynchronous background processing workflows.
- Applied AI-first development practices and Specification-Driven Development (SDD) to improve software delivery and code quality.
- Developed automated end-to-end tests using Playwright to validate application functionality and prevent regressions.
- Contributed to backend architecture, CI/CD improvements, and performance optimization across cloud-based applications.

Quartz Solution S.A.S., Cloud DevOps & Security Engineer — Ecuador
Mar 2026 – present
9 months

Cloud and DevOps engineer focused on AWS infrastructure, secure application deployments, performance optimization, and cybersecurity.

- Managed AWS cloud infrastructure using EC2, ECS, Fargate, Aurora, S3, and Elastic Load Balancing.
- Deployed and maintained containerized applications, supporting scalability, availability, and operational reliability.
- Optimized application performance, database configurations, and cloud infrastructure to improve system efficiency.
- Conducted penetration testing, vulnerability assessments, and security hardening across web applications and cloud environments.
- Configured and maintained Linux servers, Nginx reverse proxies, SSL/TLS certificates, and CI/CD deployment workflows.

Soluciones Tecnológicas ATI Jaguar, Full Stack Software Developer — Ecuador
Mar 2023 – Feb 2026
3 years

Full Stack Developer focused on building secure, maintainable, and scalable web applications using TypeScript and modern web technologies.

- Developed and maintained multiple full-stack applications using TypeScript, Angular, and NestJS.
- Designed and implemented RESTful APIs and microservices-based architectures.
- Contributed to public-sector software projects, applying secure development practices.
- Implemented containerized deployments using Docker and supported CI/CD workflows.
- Collaborated in Linux-based development environments using Git for version control.

Education

BS **Universidad de las Fuerzas Armadas ESPE**, Software Engineering — Ecuador
In Progress — Jan 2022 – present

HS **U.E.F Don Bosco**, Electronics — Ecuador
Jan 2019 – Jan 2022

Projects

LuchoExpress – Distributed Logistics & Courier System
High-availability logistics platform based on microservices
- Microservices architecture with Spring Boot, NestJS, RabbitMQ, and Redis
- Angular and Ionic interfaces with PostgreSQL and MySQL persistence

XDRing – IoT Security System with Facial Recognition
Hybrid IoT-based perimeter security system with real-time alerts
- Raspberry Pi and Arduino system with facial recognition in Python
- Real-time alerts and remote control via Telegram API

Multitax – Martian Exploration Management Simulator
Cross-platform mobile application for Mars mission logistics simulation
- Cross-platform mobile app (iOS/Android) built with Ionic, Angular, and Capacitor
- Dynamic layered maps, vehicle navigation, and real-time sensor monitoring with an immersive UI

Skills

Programming Languages: TypeScript, JavaScript, Python, Java, C++, C#

Frameworks & Technologies: Node.js, NestJS, Angular, React, Next.js, REST APIs, GraphQL

Cloud & DevOps: AWS (EC2, ECS, Fargate, Aurora, S3, ELB), Docker, Kubernetes, Linux, Nginx, CI/CD, GitHub Actions

Databases: PostgreSQL, MySQL, MariaDB, MongoDB, Oracle, Redis

AI-Assisted Development: OpenAI Codex, Claude Code, AI-First Development, Specification-Driven Development (SDD), Playwright

Cybersecurity: Penetration Testing, OWASP ZAP, Burp Suite, Nmap, Metasploit, SQLMap, Kali Linux, Parrot OS

Achievements

- Speaker at a TED Talk: "Atacar para resguardar- Importancia de la ciberseguirdad ofensiva dentro de los ODS"
- Author of the scientific research article "Chaos-Driven Encryption: A Lorenz and ElGamal Hybrid Model for Secure Communication", published in the IEEE repository.
- National Army Capture The Flag (CTF) – 2nd place (College level), 4th overall

Languages

Spanish: Native

English: Advanced (Professional Working Proficiency)
